Change Log

Date	Summary
Jul 3, 2025	Hello World. Document created
Jul 15, 2025	1. Request Scope Clarification. See this change here. Bad example here 2. Clarification: SDG required for OUTPUT of prompt, not for prompt input

Project Overview

You will begin by writing a **Prompt**. In this coding-centered project, the prompts you create should:

- Have a realistic purpose in a real-life context
- Focus on a unique ask that can only be answered by structured data
- Solve a real-world problem using structured data

You will achieve project's mission by writing prompts with the following structure:

CONFIDENTIAL | gamermada2@gmail.com+outlier | 2026-02-13T13:50:00.694Z

1. **Personal Perspective:** prompts should instruct on **managing** or **generating** Structured Data in a daily life situation
2. **Context:** Context should be provided only when it provides the information necessary to achieve the desired outcome. Otherwise, the request should be straightforward, in the same way you would request something from an LLM.
   We do NOT want the prompt to mention irrelevant things that make it sound unnatural.
3. **Clear Asks:** specific requests or tasks to be completed to solve your imagined problem involving Structured Data.
4. **Goal / Value:** The desired outcome that you want the model to achieve.

Key Terms

Term	Description
Structured Data Generation	This project revolves around **Structured Data.** Organized and formatted data following specific instructions or templates. **Q: What is Structured Data?** **A: Structured Data involves structures such as:** 1. JSON (pretty-printed JSON or Compact JSON) 2. Dictionaries 3. Lists 4. Array 5. CSV 6. YAML 7. XML 8. Tables 9. Customized Schema: In this case, the user will define a customized schema that is representable by natural language. Example: “Help me to brainstorm research ideas in machine learning. Put your responses in the following way: [-IDEA_NUMBER-, *TOPIC*, #DESCRIPTION#]” This data is often used in machine learning, data science, and computer science applications, e.g. “Here is a template of json: {“A”: ..., “B”:...}, generate 3 json strings with this template for the following use: ...”

Here are quick examples of prompts, to help you understand what makes a good prompt:

✅Good Example	❌ Bad Example
To streamline our data collection and analysis process, I need a structured way to track each mouse's progress throughout the trial. In Swift language, please generate a JSON object example containing data for 8 mice for a single day. The object should include the following information, structured logically: • Experiment Name and ID • Date and Day number (e.g., "5/2/24 D-1") • First initial and last name of the Lab Technician recording and administering the treatment • Mouse details: MouseID, Age (in weeks), Initial Weight (in grams), Strain, Sex, Experiment Group (control, placebo, treatment), Baseline Cognitive Score (0-100) • Each day's recordings: Cognitive Score (first thing before meds to check the previous day's results), Weight, Dosage of treatment (if in the drug group, specify dosage in mg), Frequency (if in the drug group), Date and Time Administered (if in the drug group), Observation Notes. • See examples below. **Why is this a good example?** • There is a clear ask that is founded in a real life context • The prompt is asking the LLM to solve a specific problem • There are no errors • The prompt utilizes several types of structured data, and requests the LLM to manage JSON	Give me a list of the top ten movies in the past decade. Use JSON to organize the data by main actors, awards won, and gross sales. OR I'm working on a product page for a client with cards and my time is limited, can you give me a dictionary with 8 products for example? Each product has this kind of information: productId, name, imageUrl, priceAED, inStock, rating and localized product names. **Why is this a bad example?** • This task does not refer to a real person's need or have a relatable context that could be useful for something • This request does not solve a problem • It doesn't utilize different types of structured data • It also doesn't include examples • Overly simple

	I've been learning Docker for a while now and I'm currently trying to troubleshoot the "docker-compose.yml" file, but I don't know what's causing the errors. The idea is to create an image that runs Node.js and mounts it to the /app directory. Also, a PostgreSQL database is created. I would like to modify the given text in such a way that the errors in it are removed and the whole thing works correctly, besides I want you to point out the errors to me and explain in simple terms what they are.
	
	``YAML
	[Example YAML]
	``

CONFIDENTIAL | gamermada2@gmail.com+outlier | 2026-02-13T13:50:00.694Z

	Why is this a bad example? • It provides an example data structure, but it is requesting only the debugging and correction of it, not the transformation or the generation of a data structure.

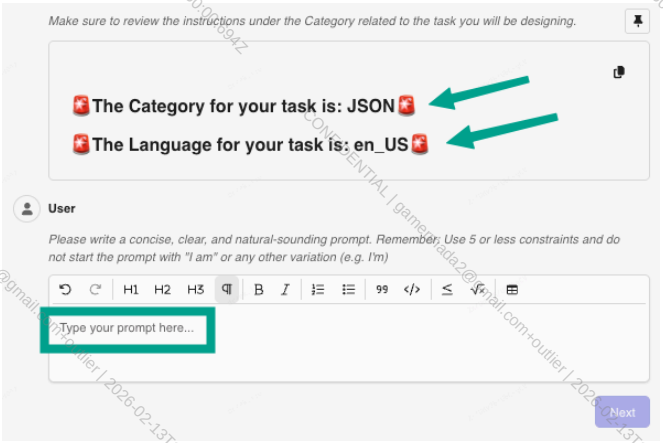

👣 Walkthrough

Step 1: Write a Prompt

1. **MUST** write a prompt that requires the Structured Data called out here.
    a. **MUST** request the generation of one of the allowed data structures (SDG) or the transformation of one of them to another, but it cannot request the analysis or the correction of one (debugging), since this is out of the scope of the project. 7/15 Update
    b. **MUST** require the SDG as an **output**, NOT AS AN INPUT
2. **MUST** write a ⭐NATURAL⭐ prompt for the listed language.
3. **MUST** write a prompt that is 🌍LOCALIZED🌍 for the listed language
4. **MUST NOT** include code that would be used to help generate your desired output (this is for a different project 😉)
5. **MAY** be bilingual with English IF AND ONLY IF this is entirely representative of how a real life dev might write their prompt

---

Q: What does a ⭐NATURAL⭐ prompt mean?

A: Imagine you're a developer somewhere based in your locale turning to an AI assistant in the middle of the day:

1. You're blocked, curious, or double-checking something.
2. You phrase the question the way you'd type into your favorite LLM or Stack Overflow.
3. You don't add formal instructions like *"You are ChatGPT"* or bullet-point constraints.
4. It shouldn't read like a polished spec, a homework assignment, or anything that smells auto-generated. Think shorthand and real-world jargon if that's how you'd actually ask.

If the prompt feels like something you might genuinely paste while on the job, you're on the right track.

Q: What does a 🌍**LOCALIZED**🌍 prompt mean?
A: It SHOULD meet all of the following:

1. Correct use local units, currency, date formats, separators, grammar, spelling
2. Bilingual mashups are "OK", especially if it is representative of ⭐**NATURAL**⭐
3. NOT anti-localized "evaluate the structure named 'colour'" (anti-localized for en_US since it uses UK spelling convention)

Examples:

- **Localized 🇬🇧UK Prompt:**
  I'm reviewing my monthly grocery spending in various UK shops and want to know where my money goes, so I need you to create a table that lists the name of each shop, the total spend in £, the number of visits, the average spend per visit, and the date in DD/MM/YYYYYY. The shops I usually shop at are Tesco, Sainsbury's and Waitrose, so create 5 examples using those shops.

  1. It requests that the currency be in British pounds (£).
  2. It mentions common stores in the UK, such as Sainsbury's.
  3. Uses "shops" to refer to the place where purchases are made.

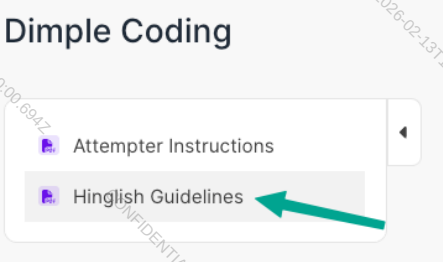

- **Localized 🇺🇸US Prompt:**
  I'm tracking my monthly spending at different US stores to better manage my budget, so I need you to generate a JSON with the name of each store, the total amount spent in $, the number of visits, the average spend per visit, and the date in MM/DD/YYYYYY. I will compare spending between stores like Walmart, Target, and Trader Joe's, so create 5 examples with those stores.

CONFIDENTIAL | gamermada2@gmail.com+outlier | 2026-02-13T13:50:00.694Z

1. It requests that the currency be in US Dollar ($).
2. It mentions common stores in the US, such as Walmart.
3. Uses “stores” to refer to the place where purchases are made.

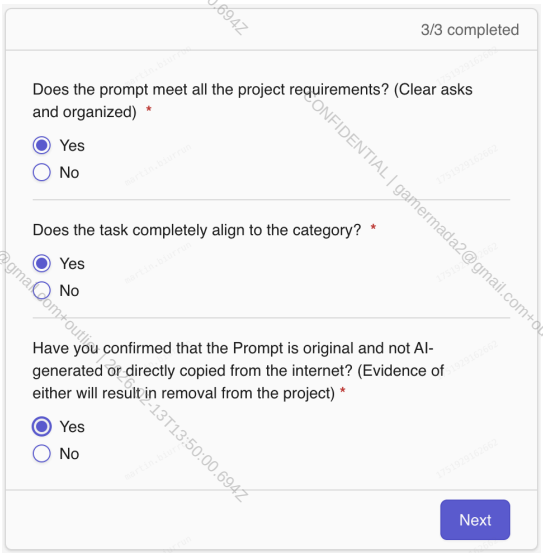

🇮🇳**Special instructions for Hinglish!**🇮🇳
Please review the following to understand the different combinations of Hinglish that this task will touch on the Hinglish guidelines on the left specifically:

1. Hindi Latin (hi_LATN)
2. Hindi Latin + English (hi_LATN + en_IN)
3. Hindi Latin + English + Deveangari (hi_LATN + en_IN + hi_IN)

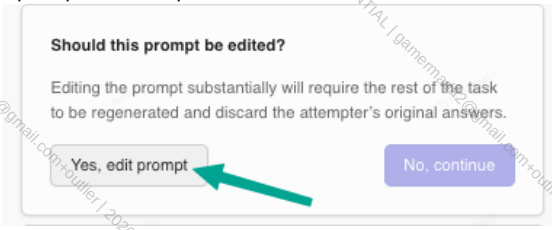

Step 2: Evaluate your Prompt

1. You **MUST** confirm that your prompt meets each of the requirements.
    a. If prompt is not good enough, you may go back and edit.

If prompt edit is required:

Wooohooo!! 🎉 Submit Task 🎉

⚠️ Common Errors

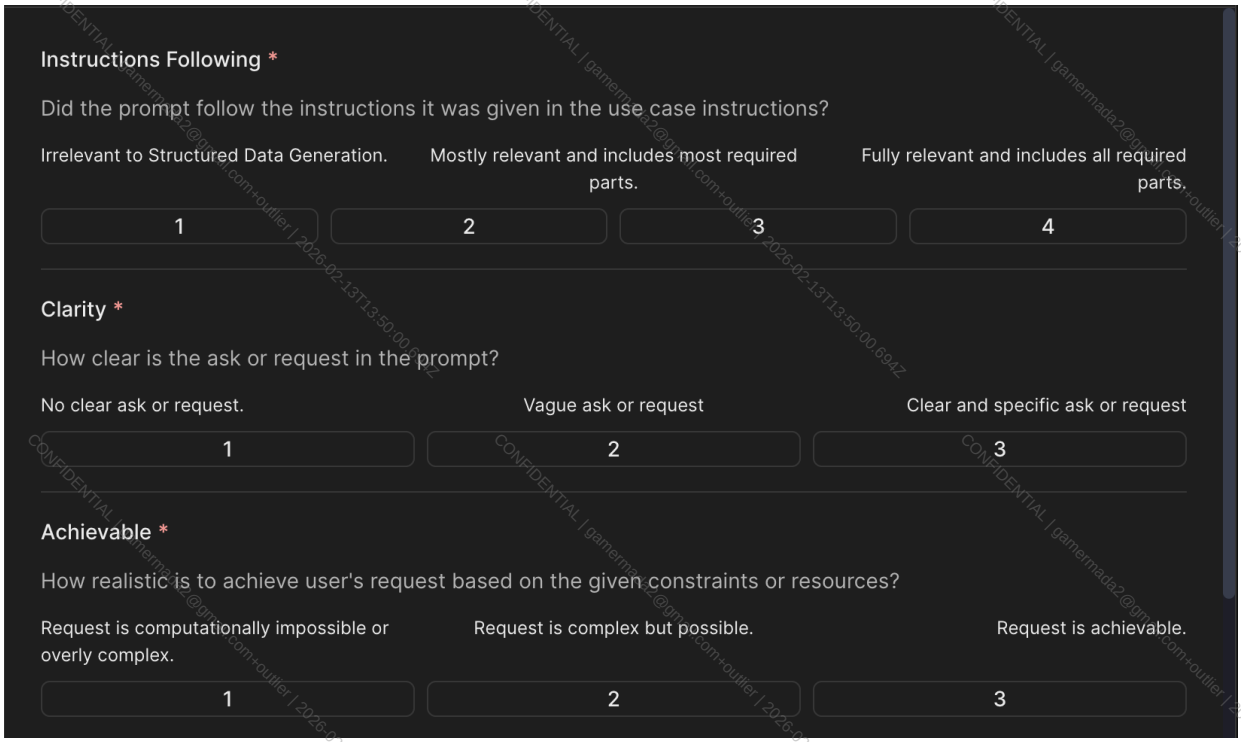

NOT WRITING PROMPTS WITH REAL-WORLD APPLICATION

CONFIDENTIAL | gamermada2@gmail.com+outlier | 2026-02-13T13:50:00.694Z

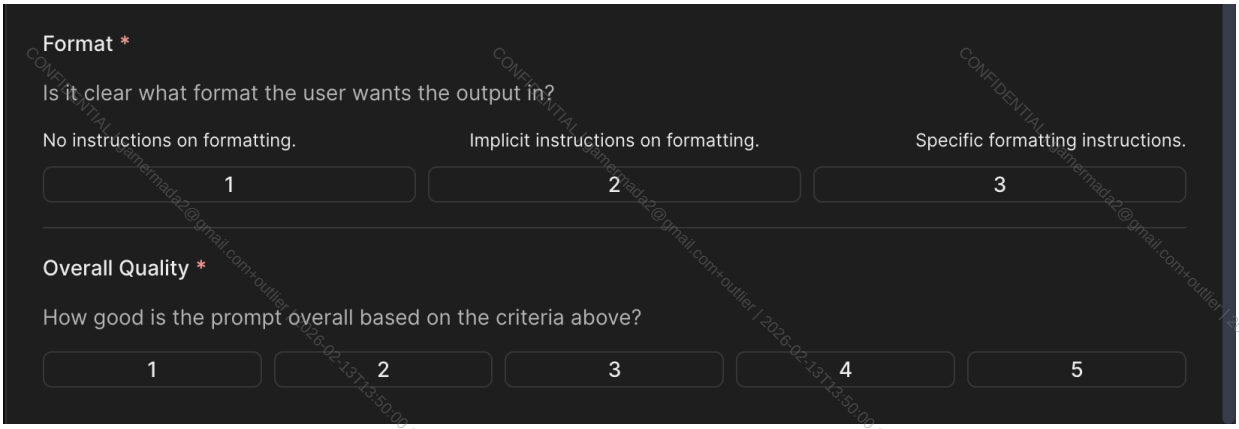

- Please make sure that your prompts solve a problem in the real world, and are not made-up or pointless
- While it's fine to create a fictional prompt (it doesn't have to be from your own life), it should be grounded in verifiable facts and something that occurs in the real world

❓ FAQ

Q: How will I be evaluated for my work?
A: Reviewer will look at the prompts and responses you write and use the following criteria to rate your tasks:

CONFIDENTIAL | gamermada2@gmail.com+outlier | 2026-02-13T13:50:00.694Z

Q: I am EQ!!!!?
A: There will be a project-wide throttle. Once we review your tasks AND determine that your quality is good, then we will unthrottle you.
